RAPID PROTOTYPING, RAPID MANUFACTURING & MATERIALS FORMING

## Taking a seat at the Dome

The Millennium Dome's Spiral of Innovation displays an innovative and modern seating range manufactured by **OMK Design**. The Seville seating has been specially designed for use as short-stay seats in airports, museums and stations.

Constructed from aluminium extrusions supplied by Hydro Aluminium Profiler, the Seville has a silver anodised finish creating a contemporary look for the new century. The Seville is one of 26 products on display in a brightly illuminated product pod embedded in the internal wall at the top of the Dome's Spiral of Innovation.
